#### **EXPERIMENT**

## Title

MATHS TEST

#### **Description**

Alice has a mathematics test for which she is underprepared. She has to do at least one question correctly to pass the test. He decides to do a question which needs her to find the smallest prime number which is larger than a given integer N. Your task is to find and return an integer value representing the smallest prime number larger than N.

#### **Input Format**:

input1: An integer value N

#### **Output Format:**

Return an integer value representing the smallest prime number larger than N.

478

#### Sample Input

#### **Sample Output**

7

#### **Source Code:**

```
def next_prime(N):
    num=N+1
    while True:
        is_prime=True
        for i in range(2,int(num**0.5)+1):
            if num % i==0:
                 is_prime=False
                 break
        if is_prime:
            return num
        num+=1
N=int(input())
result=next_prime(N)
print(result)
```
